

Stop Smoking!

New 3-stage cigarette filter prevents tar from reaching lungs

ANTI TAR Cigarette Filter Tips – Introduction

Anti Tar is a brand of cigarette filters that's plastic. Most cigarettes have cellulose-based filters that barely filter out 30% of the tar in smoke. An Anti Tar 3rd gen plastic filter can prevent nasty tar in cigarette smoke from entering your lungs.

In addition to tar, it filters out other toxic substances like nicotine as well. The real kicker is that it does all that without compromising the quality of your smoking experience. The smoke passes through the cigarette, meaning you still get that satisfaction of a good draw.

Benefits

Generally, cigarettes have a huge amount of nicotine. This amount is enough to get you addicted to smoking. This addiction urges you to buy more cigarettes; thus, the companies generate more revenue. They get all that at the cost of your health.

Thus, the company's paltry attempts at creating tar filters aren't that sincere, especially since an actual filter would reduce the amount of tar and nicotine. That's why **Anti Tar** filters are so revolutionary.

These filters reduce the amount of tar and nicotine you inhale, making it easier for you to quit in the long run. Since tar is the compound that stains your teeth, you'll have a brighter smile. Over time, it should also reduce other side effects, like a sore throat.

Anti Tar filters are comfortable to use and prevent any backflow. Plus, your smoke tastes much better once all the tar is gone. These better-flavoured and smoother puffs enhance your experience.

Filter Design – How Does It Work?

The Anti Tar filter utilises patented technology — a triple filter system. There are three filters in the design, these are:

- Microporous plastic filters – the first layer of filtration, this filter takes out massive amounts of tar from the smoke.
- Nano beads – these filter beads are made with silver ions. They sterilise and purify the smoke, so the toxins don't enter your body.

- High-fibre cotton – the final line of defence, this cotton filter separates any toxins in the smoke that haven't been removed.
- After the smoke passes through these three filters, it is safe for consumption. Or at least, it's safer than it was before.

As your tar and nicotine consumption decreases, you're less likely to encounter health issues because of smoking. When you start to quit, you'll also notice that the filter did a great job minimising withdrawal symptoms. Introducing this filter is a good idea when you want to stop. It sure beats the cold turkey method of curbing your addiction.
